HANNA BOIKO

Python / Full-Stack Developer

Batumi, Georgia | annaboiko377@gmail.com | +995 568 925 404 | +380 93 741 8399
linkedin.com/in/hanna-boiko-5a6552431 | github.com/CppLover-code | Portfolio: bookstoredigital.xyz

SUMMARY

Full-Stack Developer with over three years of commercial experience building production web applications in Python, Django REST Framework, FastAPI, PostgreSQL and React, currently working as a freelance developer. Promoted from Junior to Middle Developer at Luxoft while building a monitoring and diagnostics platform with FastAPI and React, and delivered backend services and React interfaces for a patient-facing healthcare portal at SiamComputing. Independently designed, built and deployed a production e-commerce application end to end, from REST API and database schema to a React frontend running on a Linux server with Docker, Nginx and CI/CD.

EXPERIENCE

Freelance Full-Stack Developer — Self-Employed | 08/2026 – Present

Batumi, Georgia (Remote)

Python, Django, Django REST Framework, FastAPI, PostgreSQL, React, Tailwind CSS, Vite, Docker, Nginx, Gunicorn, GitHub Actions

- Design, build and deploy full-stack web applications end to end, from REST API design and database schema to React frontend and production deployment on Linux servers.
- Work directly with stakeholders on requirements, scope and delivery timelines.

Book Store — Full-Stack E-commerce Application

Live: bookstoredigital.xyz | Code: github.com/CppLover-code/Book_Store

- Built RESTful APIs with Django REST Framework for a product catalog with search, filtering, sorting and pagination, shopping cart and order workflows, backed by a PostgreSQL schema and Django ORM.
- Implemented JWT authentication with refresh-token rotation and role-based access control, with a responsive React frontend using React Router and protected routes.
- Containerized the application with Docker and deployed it on a Linux server with Nginx and Gunicorn under a custom domain over HTTPS, with a GitHub Actions CI pipeline for automated testing, linting and builds.

Crypto Monitoring & Alert Service

Code: github.com/CppLover-code/Crypto-alert-service

- Developed an asynchronous monitoring service with asyncio and aiohttp, exposing REST endpoints via FastAPI and persisting data with SQLAlchemy.
- Integrated external cryptocurrency APIs for market data collection and implemented automated alerts through the Telegram Bot API and email.

Backend Python Developer (Middle) — SiamComputing | 03/2025 – 07/2026

Remote

Kauvery Hospital — patient-facing digital platform and primary online touchpoint for Kauvery Hospitals, a multi-specialty chain of 12 hospitals with 500+ doctors serving over one million patients a year across Tamil Nadu and Bengaluru.

Python, Django, Django REST Framework, FastAPI, Celery, Redis, PostgreSQL, React, Docker, Git

- Built backend APIs and business modules for the Patients Portal, covering appointment booking, patient accounts and the medical specialities catalogue across multiple hospital locations.
- Designed PostgreSQL data models and implemented authentication, request validation, business logic and third-party API integrations for patient-facing services.
- Implemented React components and screens for the Patients Portal and wired them to the backend APIs.
- Implemented background and scheduled task processing with Celery and Redis task queues.
- Used Cursor IDE as an AI-assisted development tool for coding, refactoring and debugging to speed up routine implementation work.
- Packaged and ran services in Docker containers, supporting releases and troubleshooting production incidents.
- Analysed production issues involving API latency, database connectivity, connection pool exhaustion, background worker failures and overall service reliability.
- Participated in requirement analysis, architecture discussions, code reviews, testing and technical documentation.

Luxoft | **11/2022 – 01/2025**

Odesa, Ukraine | Hybrid (on-site and remote)

Monitoring and diagnostics platform providing local and remote data access, analytics and troubleshooting for distributed equipment.

Python, FastAPI, SQLAlchemy, Celery, PostgreSQL, Redis, React, Docker, GitLab CI/CD, PyTest, Swagger / OpenAPI, Bash

Middle Full-Stack Developer | **10/2023 – 01/2025**

- Designed and developed 40+ REST API endpoints in Python and FastAPI covering telemetry ingestion, analytics queries and remote troubleshooting operations.
- Built asynchronous processing pipelines with Celery and Redis for high-volume telemetry ingestion without blocking API response times.
- Optimized PostgreSQL queries and indexes on the main analytics endpoints and introduced Redis caching for frequently requested diagnostics data to reduce database load during peak hours.
- Modelled and maintained relational schemas with SQLAlchemy, including database migrations and data-access patterns for high-volume tables.
- Implemented JWT-based authentication and role-based authorization separating field engineers, analysts and administrators.
- Developed React interfaces for monitoring dashboards and device detail views, building a set of around 20 reusable components used across the application.
- Expanded the PyTest suite covering API behaviour, authentication flows and error handling, and maintained API contracts in Swagger / OpenAPI consumed by integrating teams.
- Containerized services with Docker and Docker Compose and maintained GitLab CI/CD pipelines with caching and parallel jobs.

Junior Full-Stack Developer | **11/2022 – 10/2023**

- Developed and maintained full-stack features for the platform, delivering REST endpoints in FastAPI and user interfaces in React as part of a cross-functional team.
- Implemented scheduled data-collection jobs with Celery and Redis, storing diagnostics data in PostgreSQL.
- Improved system quality by identifying recurring failure patterns across support tickets and documenting standard operating procedures, and participated in code review and refactoring of legacy modules.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework, FastAPI, SQLAlchemy, Django ORM, Celery, REST API, JWT Authentication

Frontend: React, React Router, JavaScript, HTML5, CSS, Tailwind CSS, Vite

Database: PostgreSQL, SQL, Redis

DevOps & Deployment: Docker, Docker Compose, Nginx, Gunicorn, Linux, Bash, GitLab CI/CD, GitHub Actions, CI/CD, Git

API & Testing: RESTful API Architecture, Swagger / OpenAPI, PyTest, Postman, Backend Testing

EDUCATION

Diploma in Software Development — IT STEP Academy (Computer Academy STEP)

Odesa, Ukraine | 09/2021 – 05/2023

Bachelor's Degree in Philology — South Ukrainian National Pedagogical University named after K. D. Ushynsky

Odesa, Ukraine | 2013 – 2017

CERTIFICATIONS

HackerRank: SQL (Advanced), REST API (Intermediate) — Sep 2026

Cisco Networking Academy: IT Essentials — May 2022

LANGUAGES

English – B2 | Ukrainian – Native | Russian – Native | Turkish – B1

INTERESTS

Volunteering, music, hiking, tennis.
